## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6, drawn to a peptide composition, classified in class 530, subclass 300.
  - II. Claims 9 and 10, drawn to a method of identifying a derivative, classified in class 435, subclass 7.1.
  - III. Claim 7, 8 and 11, drawn to a method of treating a pathological disorder, classified in class 514, subclass 2.

Invention I is related to inventions II – III by product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the peptide of invention I may be used in materially different processes such as in a method of generating an antibody or in any one of the inventions II – III.

The methods of inventions II and III require different products and steps and have different endpoints: Invention II results in the identification of a compound; Invention III results in the recovery of a patient. Therefore, inventions II and III are patentably distinct.

2. In addition, each of inventions I through III are directed to patentably distinct and/or independent peptides disclosed as SEQ ID NO: 2-24 (or use thereof). Absent factual statement/evidence to the contrary, each different peptide sequence is considered distinct and/or

Art Unit: 1653

independent, one from the other on the basis of physical, chemical and biological properties and function(s). Thus, when any one of the inventions I through III is elected under 35 USC 121, an additional election under 35 USC 121 is also required as to the elected peptide (by SEQ ID NO). This selection of the peptide (and/or the polynucleotides encoding the peptide) by SEQ ID NO is not a species election.

Should Applicant traverse this additional restriction requirement, Applicant should indicate as to what is the physical, chemical and biological property and function that is common between the peptides. The elected invention will then be examined only as it pertains to the elected invention, I- III, and the disclosed common physical, chemical and biological property and function of the disclosed peptides.

3. Because these inventions are distinct for the reasons given above and the search required for Invention I is not required for Invention II- III and the search required for SEQ ID NO: 2 is not required for SEQ ID NO: 3-24, restriction for examination purposes as indicated is proper.

*Advisory Information*

A telephone call was made to Jonathan Dermott on February 8, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1653

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
